JEN ACADEMIA · PARENT & STUDENT REMINDERS

LINE Reminders Setup Guide

A one-time setup guide for the school's LINE account administrator. No payment is required, and you never have to share your LINE password with anyone.

Prepared October 2026 · Time needed: about 15–20 minutes · You will need a computer and your phone

This guide sets up the school's **LINE Official Account** so that students and teachers can receive class reminders, reschedule updates, and contract-expiry notices directly in LINE.

You will do all of the LINE-side work yourself. Your web administrator only needs three keys from you (explained in Part 3). You keep your LINE login private the whole time.

What this will do when it is finished

- A student connects their LINE account once, from the school website.
- They receive a reminder 30 minutes and 10 minutes before class.
- They receive a message when someone asks to reschedule, and when a request is approved or declined.
- They receive a warning before a class package expires.

Before you start

- [ ] A computer with a browser (Chrome, Edge, or Safari). The LINE console is much easier on a computer than a phone.
- [ ] Your phone with LINE installed, for the final test.
- [ ] The exact school name you want students to see.
- [ ] About 15–20 minutes of quiet time.

Keep these private

Never send anyone your **LINE password** or the **six-digit code LINE sends to your phone**. No legitimate setup needs them. The three items in Part 3 are different: they are keys for the school's Official Account, not your personal account, and they can be replaced at any time.

Part 1 — Create the school's LINE Official Account

1. On your computer, open **manager.line.biz** in your browser.
2. Sign in with your LINE account. If it offers to create a business account, you may use that instead. Using your personal LINE login is normal — you are not sharing it with anyone.
3. Choose **Create an Official Account**.
4. Fill in the details:
   - **Account name:** JEN Academia (or the school's exact name)
   - **Category:** Education
   - **Country / region:** Philippines
5. When asked to choose a plan, choose **Free**. Do not add a payment method.
6. Finish the setup. You will land on the account's dashboard.

> **What you should see**
>
> A dashboard with the school's name, a menu on the left, and a message saying the account is ready. The account may be marked *unverified* — that is normal and does not stop reminders from working.

Part 2 — Create the Messaging API channel

This is the part that lets the school's website send messages through the Official Account. It is free and separate from your personal LINE.

1. Open **developers.line.biz/console** in the same browser.
2. Sign in with the **same LINE account** you used in Part 1.
3. If it asks you to register as a developer, accept the terms. This is free.
4. Click **Create a new provider** and name it **JEN Academia**.
5. Open that provider and click **Create a Messaging API channel**.
   Choose **Messaging API**, not "LINE Login". LINE Login is a different product and will not send reminders.
6. Select the Official Account you created in Part 1.
7. Fill in the channel details:
   - **Channel name:** JEN Academia
   - **Description:** Class reminders and schedule updates
   - **Category:** Education
8. Agree to the terms and click **Create**.

You will now see a page with tabs such as **Basic settings** and **Messaging API**. Keep this page open for the next part.

Part 3 — Copy three values and send them to your web administrator

These are not your password. Think of them as keys to the school's mailbox: they let the school's website send messages as the Official Account, and they can be replaced whenever you want.

What it is	Where to find it	What it does
Channel secret	**Basic settings** tab → find "Channel secret"	Proves a message really came from LINE
Channel access token	**Messaging API** tab → "Channel access token (long-lived)" → click **Issue**	Lets the website send messages as the school
Basic ID	Top of the **Messaging API** tab, or in **Basic settings**. It looks like `@123abcd`	The name students search for and the add-friend link

Send these three values to your web administrator in a **private message** — not in a group chat and not on a public page. If you prefer not to paste them in chat, read them aloud on a call or use a password-manager share link.

> **If these ever leak**
>
> Go back to the **Messaging API** tab and click **Issue** again on the channel access token. The old token stops working immediately. Your web administrator will then need to update the server with the new one.

Part 4 — Turn off LINE's automatic canned replies

If you skip this, LINE's own robot will answer students with generic text and can interfere with the linking code.

1. Stay on the **Messaging API** tab.
2. Find the **LINE Official Account features** section.
3. Next to **Auto-reply messages**, click **Edit** and set it to **Disabled**.
4. Next to **Greeting messages**, click **Edit** and set it to **Disabled**.
5. If you see a setting called **Response mode**, choose **Bot**. If you do not see it, skip this step.

Part 5 — Stop here and wait for your web administrator

Send the three values from Part 3 now. Your web administrator must put them on the server before the next step will work.

They will reply with the exact **webhook address**. It will look like this:

```
https://<the school's server>/api/line/webhook
```

Do not guess this address. It must be the exact one you are given, and it must start with **https://**.

Part 6 — Connect the website to LINE

Do this only after your web administrator confirms the server is ready.

1. Go back to the **Messaging API** tab.
2. Under **Webhook settings**, paste the address you were given into **Webhook URL**.
3. Click **Update**.
4. Turn **Use webhook** to **ON**.
5. Click **Verify**. You should see **Success**.

> **If Verify fails**
>
> Tell your web administrator the exact error message. The usual causes are a typo in the address, the server not being ready yet, or the address not starting with **https://**. Nothing is broken — the step can simply be repeated.

Part 7 — Test it

1. On your phone, open LINE and add the school's Official Account as a friend. Search for the Basic ID, or use the link or QR code from the school app.
2. You should receive a welcome message explaining how to connect your account.
3. Send any six digits, for example `000000`. You should receive a reply saying the code did not match an account or has expired.

   This is a good result. It proves LINE and the school's server are talking to each other.
4. Now open the school app → **Account** → **Connect LINE**, and follow the six-digit code shown there. You should receive a "Connected" message.

Students will do the same thing themselves. They do not need to search for the account by name — the app gives them a button and a code.

> **What students will see**
>
> On the Account page, a card titled **LINE reminders** lets them connect, pause messages without disconnecting, or disconnect completely. Each student does this once.

If something goes wrong

What you see	Likely cause	What to do
You cannot find the Basic ID	It is on a different tab	Check **Basic settings** as well as the top of **Messaging API**.
Verify fails	Server not ready, or a typo in the address	Send your web administrator the error message. The address must start with `https://`.
A friend gets no welcome message	Webhook is off, auto-reply is on, or response mode is not "Bot"	Repeat Part 4 and Part 6.
"That code did not match"	The code expired (10 minutes) or belongs to a different account	Generate a new code from the school app and send it again.
Students cannot find the account by searching	The account is still unverified	Use the button or link in the school app instead of searching. Reminders still work.
"This account is already connected to LINE"	The account is linked to a different LINE profile	Use **Disconnect** on the Account page first, then connect again.

About cost

The LINE Official Account, the Messaging API, and the school website connection are all **free to start**. LINE gives every account a monthly allowance of free messages; the exact number depends on the region (roughly 200–500 per month).

The school's setup uses two reminders per class, for the student and the teacher. For a small tutoring load, the free allowance is normally enough. If the school grows, the simplest saving is to send only the 10-minute reminder, which halves the usage. Your web administrator can change that setting.

If the monthly allowance runs out, LINE simply stops accepting new reminders until the month resets. Classes, approvals, and the website keep working, and the free plan cannot create a bill.

Final checklist

- [ ] Official Account created and set to the Free plan.
- [ ] Messaging API channel created and linked to that account.
- [ ] Channel secret, channel access token, and Basic ID sent to the web administrator.

- [ ] Auto-reply messages disabled.
- [ ] Greeting messages disabled.
- [ ] Response mode set to “Bot” (if the setting exists).
- [ ] Webhook address pasted, updated, and “Use webhook” turned on.
- [ ] Webhook verified successfully.
- [ ] A test message from your phone received a reply.
- [ ] One student account connected successfully from the school app.

Remember

Keep your LINE password and the six-digit code LINE sends you private. Share only the three keys in Part 3, and only with your web administrator. If you are ever unsure about a request for account access, stop and ask first.
